

**In the Specification:**

At the end of page 27, please insert the following:

--When the care 100 moves closer to point P4 in FIG. 2, the carrier transmitted to the first wireless communication device 26 fro the base station BS-A1 starts to decrease in filed intensity level. If the field intensity level decreases to a value that is not higher than a predetermined on (YES in step S132), the communication controller 112 retrieves a base station targeted for roaming from the base station information database on the basis of the position of the car (step S133). For example, in FIG. 2, the base station BS-A2 is retrieved as a base station targeted for roaming.

Actually, it is desirable to take into consideration the moving direction of the car as well as the position thereof. By doing so, the optimum base --
